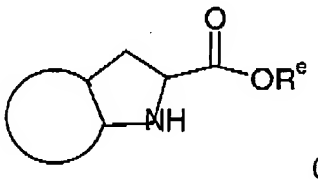
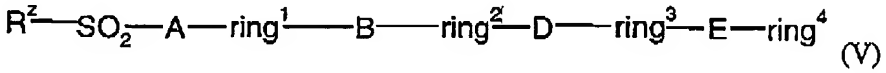
4. (Withdrawn) A process for preparing the compound of claim 1, comprising



(IV)

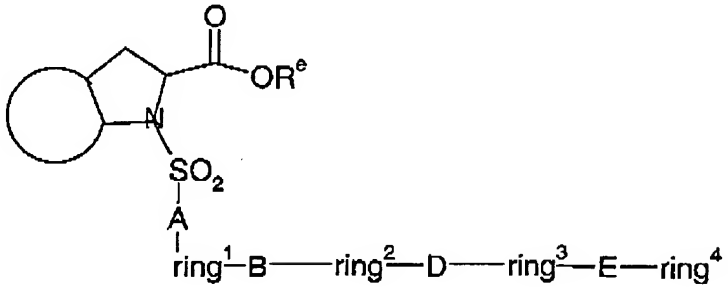
wherein R^e is a hydrogen or an ester protecting group, with a compound of formula V,



(V)

in which A, B, D, E and $ring^1$, $ring^2$, $ring^3$ and $ring^4$ are defined as in the compound of formula I, and wherein R^z is chlorine atom, imidazolyl or OH,

in the presence of a base, or after silylation with a suitable silylating agent, to give a compound of formula VI,

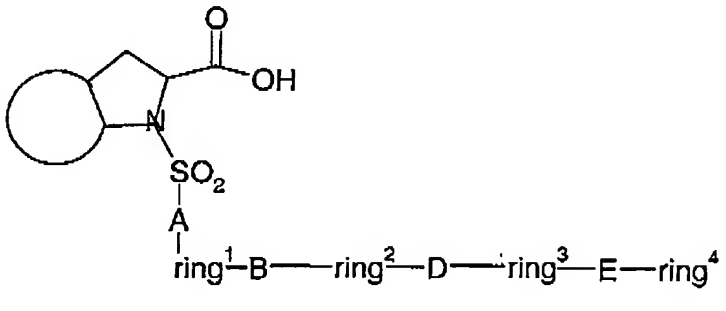


(VI)

wherein A, B, D, E, R^e and $ring^1$, $ring^2$, $ring^3$ and $ring^4$ are as defined above, and

b) where R^e is the ester protecting group, reacting a compound of formula VI, which has been prepared in accordance with step a), with a solution of an alkali such as NaOH or LiOH, and then treating with acid, to give the carboxylic acid of formula VII, with

modifications in one of the side chains of ring[1]- ring[4] also having previously been carried out, where appropriate,



(VII)

and then converting this compound into the compound of formula I wherein X is NH-OH, and
